

## Oil Separation and Stabilisation Package

We provide complete separation, dehydration, and desalting solutions for crude oil. We can design and supply a full range of multiphase separators, electrostatic coalescers and compact oil treaters for both onshore and offshore. Our solutions range from a single separation equipment to a complete oil treatment system to ensure oil is delivered to the required specifications and cost effectively. Our Oil Separation and Stabilisation Package equipment are engineered to ensure adequate separation through competitive solutions for your unique crude-oil composition to meet export oil specifications for BS&W, Salt and RVP.
